

ACCESS CONTROL

Faster entry, better security, complete data capture

Scan barcoded tickets in real time at turnstiles or using handheld scanners for rapid entry, improved security, and detailed customer data management.

Features and Benefits

Unique bar code identifier validates each ticket

Easy entry.

Scan barcoded tickets using turnstiles or handheld scanners.

Wireless scanning

Flexibility.

State-of-the-art handheld wireless scanners allow box office personnel to scan any where in your venue, including VIP entrances, and luxury suites.

Redundant backup

Rock solid reliability.

If server connection is ever lost, handheld scanners continue to admit customers, then automatically synchronize when connection is re-established.

Real-time reporting

Up to the minute results.

Reporting capabilities include attendance, invalid tickets, and unused tickets, providing timely understanding of attendance activity.

Built-in security

Reduce fraud, prevent loss.

All ticket sales are recorded, and validated through access control scanners, admitting only authorized tickets. Fraud is dramatically reduced.

Data-mining

Marketing insight.

Back-end reporting capabilities deliver insight into marketing effectiveness. Reports include comps vs. revenue, comp no-shows, and attendance by price scale and buyer type.

Ticket tracking

Accountability.

Track tickets for single and multi-day events, VIP passes, employee, and media badges.

Data export

Better data, better reporting.

Access control runs on open database standards (SQL/ODBC) which means you can export your data to spreadsheets and word processors for further analysis, reporting, and presentations.
